List indicators C1 action

29 June 2016.

Introduction

There is now a concern for quality, efficiency, productivity and competitiveness in all areas, which is the result of the globalization process. It seeks to improve, and for this, the use of quantitative and qualitative information allows to develop an evaluation process to compare against the evolution of an activity that takes place in a certain time against an initial situation which is previously established.

The evaluation is often the most overlooked of the projects. To include a project to evaluate how it will facilitate monitoring of the guide it in its implementation phase, determining what data we collect for the final evaluation. The evaluation is done through a systematic collection of information focusing on what we have called indicators. Indicators are concrete, measurable facts or expressions whose values allow us to measure the adequacy, effectiveness and efficiency of our project. To evaluate properly you need to specify and to explain them from the beginning.

In general, an evaluation plan includes aspects such as what we want to evaluate, and relevant indicators. It is also interesting to establish what procedures and techniques will be used for obtaining and collecting data.

The outcome indicators, where indicators of activity are included, consist of the state of accomplishment, number of participants, etc.

In this way is seeking an evaluation of the project including minima as:

 Check the level of achievement of the overall objective and intermediate objectives, by assessing the degree of achievement of the goals (operational goals).

- Determine the activities carried out, specifying its level of adjustment as provided

in the schedule and estimate its contribution to achieving the goals, identifying possible improvements.

- Determine what resources are effectively used and how intensively, assessing their usage (efficiency ...).
- To assess management processes, and identify improvements from the experience.
- Know the valuation of the end users and stakeholders.

Finally, by identifying indicators not be forgotten quantify the minimal number to get to corroborate the evaluation has been positive or negative.

Objective

The objective of this report is to show the list of indicators that will work throughout the project to carry out monitoring. In the project proposal a preliminary list of indicators was included, but it is necessary to establish a final list and evaluate the initial situation.

Techniques for obtaining and collecting data

To obtain and collect data and indicators of implementation actions using control sheets each test will be filled. For dissemination actions and on knowledge transfer leaves signature assistants and records available on Google Statistic (for the website) or included in the website itself (for downloads or forms used) will be used. The rest of the actions will be counted individually.

Finally, Excel will fill monthly indicators including the date of the activity, to be compared with the goal set in date and number.

Once completed the Excel colors, to go on time or out of it will be used. The green color indicates a correct position, while yellow is indicative of having reached the goal, but after the deadline. The red color is indicative of not meeting the expected result.

It has also been established good communication between the coordinating partner and the other partners, by developing a set of activities designed to promote such communication. The partners responsible for each task will be announced at most six months a summary of the progress of the actions that are responsible or at the end of it, describing if they are developing normally and with the budget and the timeframe provided.

Once we know the information from all partners, from coordinating a report global tracking is made that is sent to all members, so that everyone is familiar with the degree of progress, the incidents encountered and the actions taken to solve them. This comprehensive monitoring report will be discussed in committee meetings. In addition, in these meetings of the committee will be checked the activities and deliverables to be made in the next six months. Therefore, this monitoring exercise will allow the indicator table fills continuously, ensuring of quality evaluation of the project.

Indicators

On the date February 15, 2016 indicators shown below are established to monitor the project, according to the established actions. A first column is included with the corresponding milestone; a second with the proposed indicator; and a third with the aim to achieve. The following columns are left to fill the track indicating the deadline or the result achieved in the corresponding date.

Because the indicators table has been established after the project started, now they have already served some time deliverable, indicating an initial situation above 0 in some cases. In addition, a case is in the D2 action, since actions have already been developed for the dissemination to the general population taking advantage of other dissemination and training activities from the project partners.
